Assay descriptions and notes

Assay B0019: Ultrasensitive qualitative detection and differentiation of *Streptococcus equi* subspecies *equi* and *zooepidemicus* by real time polymerase chain reaction.

Zoologix has verified the performance characteristics of these tests. However, diagnosis and management of the animal patient should not rely solely upon the results of these tests, as unusual genetic variations of the pathogen can affect results. Correlation with other clinical data is recommended. Specimens will be held for six months by Zoologix to facilitate followup testing, after which time specimens will be disposed of at the discretion of Zoologix unless otherwise directed by client.
